

New BARISTA HOT CUPS

A First in North America: coffee cups made from 100% recycled natural brown paper!

Stanpac uses Cascades EnviroBistro™ 100% recycled paper as a sustainable and reliable alternative to virgin or partially recycled paperboard.

This innovative cupstock manufactured by Cascades is compliant with FDA and CFIA regulations and is certified by the Forest Stewardship Council. In addition to its unique recycled content, Cascades' production uses 60% less water than the industry average, which makes this raw material a good choice to help reduce your environmental footprint.

If all cups sold in North America were made with 100% recycled paper, we could save up to 5.6 million trees every year.

New Cascades EnviroBistro™ is a sustainable and reliable alternative to virgin or partially recycled paper. It is made from 100% recycled fibers, 70% of which is post-consumer, and its natural brown color conveys an environmentally friendly appeal.

Not only does the paper have a second life, choosing Barista cups from Stanpac made with Cascades EnviroBistro™ will help you make a positive difference in the food service industry!

Stanpac is excited to introduce this new environmental alternative (presently available in 8, 12, and 16 ounce sizes) to the hot beverage industry.

- Made From 100% Recycled Paper
- Can Save Up To 5.6 Million Trees Every Year**

**Based on total consumption of coffee cups in North America in 2018, if all cups sold on the market were made with 100% recycled paper.
