

PATENT PENDING TECHNOLOGY

The sustainable eco straw that goes to work then goes away

Simple things can be brilliantly reimaged. New Phade® straws are made with PHA, an earth-friendly material derived from canola oil. Naturally, this hard-working straw is marine biodegradable* and soil biodegradable as well as home and industrial compostable.

It's the first of its kind in the U.S., and you can be among the first to offer Phade®—and show your customers you're committed to making better choices for the planet.

**Degrades 88.1% in a marine environment in 97 days per ASTM D6691 (and may or may not further degrade).*
